POWER SMOKE™

DIAGNOSTIC LEAK DETECTOR

US & International Patent-Pending Technology designed for leak testing boosted/ turbo vehicles

WHAT IF...

You could pressure test a vehicle's ENTIRE turbo intake and exhaust system with one simple test with the engine safely OFF

A single procedure reliably detects any boosted leak, pinpoints its exact location, and precisely identifies failing components

Every technician can test the entire intake / exhaust system of a vehicle as quickly and confidently as using a scan tool

Eliminate Come-Backs | Reduce Buy-Backs

- Reduce Warranty Costs
- Fix It Right The First Time: No More "Guessing"
- Smoke Fluid Contains No Dye/ Contaminants

Drastically Reduce Diagnostic Time

- Quickly Find ALL Leaks, Even Tiny Leaks That Only Occur Under Full Load
- Test The Integrity of The Entire Boosted Intake/ Exhaust System at Once

Variable Pressure | Variable Flow

- 3 - 20+ PSI Range to Match Vehicle Boost
- Performs Decay/ Leak Down Tests

Compact, Rugged Design

- Professional Grade: Steel and Billet Aluminum
- Runs on Shop Air and 100-250 V AC or 12 V DC
- Weighs Only 19 Lbs.

MADE IN

CALIFORNIA

USA
